

Mr Stephane Clement, vice-pres.

Business development, Jyga Technologies

Dear Stephane,

Miratorg is an innovative company that is always looking for ways of improving its productivity and efficiency. In an exploratory trip to Canada in 2009, we did some investigations on your Gestal FM feeding system. After visiting your factory, we did also visited your research farm. We were impressed by the piglets weight at weaning, the number of piglets under thre sows and with the sows body condition in general. So being an innovative company, Miratorg decided to purchase some Gestal FM units for a test of the equipment in one of our farm in June 2010 and then in April 2011.

We are now convinced, after months of utilisations, your Gestal FM is doing a good work in our barn and we realized that our employees are enjoying working with it. Results are so interesting that we decided to go ahead with purchasing more units. We do see improvements, as you were mentioning to us originally.

JYGA Technologies is a serious company that assisted us at any step of our introduction of the Gestal FM in our network. All user book, manuals and software were quickly translated in our language. We do appreciate your friendly service and we hope that we will develop more good business with your company in the future.

04 May 2011

Best regards,

Development director

Miratorg HG, Russia
