

To whom it may concern.

This letter is to show our appreciation in regards to the feeding system Gestal XM that we have been using in our research finishing barn for the past year.

It is of the utmost importance that the hog producer of today know with certainty the returns he will get from his herd in order for it to reach it's full economic potential. The major increases in feed costs has necessitated producers to re-evaluate and research solutions for optimal herd production in order to attain the desired level of profitability. Because of this, Hytek has purchased the Gestal XM feeding system for their finishing research barn situated in Manitoba.

The results obtained have been favorable. The Gestal XM is fairly easy to install, it uses wireless communication so less physical infrastructure is required. It's also very user friendly and was easy for barn personnel to learn. The zootechnical data is complete and precise.

The excellent service from the Jyga Technology staff combined with the efficiency of the Gestal XM system has satisfied our research team in their rigorous attempt to increase the level of production in the hog industry.

Yours truly,
