Mr. Stephane Clement,
Vice-president of Business Development
Jyga Technologies

Dear Stephane,

As you know, Genesis is a leader in worldwide swine genetics. We are continuously seeking ways to improve our genetic lines. We researched your Gestal FM feeding system, and we were impressed with your system's capacity of collecting data on sows on an individual basis. We began a trial in May of 2010.

After 6 months of utilisation, we have been very pleased with the results we've obtained, not only from a data collection perspective, but also on the regularity of our sows feeding. The Gestal FM is overall, improving our sow's daily feed intake. We have also notice that the Gestal FM feeding system is excellent for managing sows feed wastage and is not labour intensive. Your system is extremely user-friendly. We are extremely impressed that this has been done from day one of the installation of your system.

For these reasons, along with our good business relation we have developed with JYGA Technologies, Genesis Inc. has decided to retrofit our entire farm where the Gestal FM trial was standing. It is for us an essential tool for pig production improvement.

Sincerely,

A handwritten signature in black ink, appearing to read "J Long", is written over a light blue circular stamp.

Jim Long,
President & CEO of Genesis Inc.
